说明文:

It is now widely acknowledged that violent video games increase aggression. As for me, I think young people should stay far away from violent video games. There are several reasons and corresponding evidence to support my ideas.

First, violent video games will result in psychological illness. This is because games full of violence will bring too much pressure, make people feel nervous, and lead people to become aggressive. Second, violent games will cause people to lose their normal communication skills. For example, people who are addicted to online violent games are used to solving problems with violence, rather than solving problems with rational communication. As a result, staying away from violent games is beneficial to mental health and social harmony.

Considering all the above-mentioned reasons, I definitely agree that violent video games increase aggression. Therefore, we should resist violent video games to some extent to make the society more harmonious.

议论文:

It is now widely debated whether violent video games can increase aggression in real world. Some claim that video games only help to make people amused and relaxed. However, I disagree with the opinion for the following reason.

Admittedly, it is true that playing violent video games can bring a lot of fun. Nonetheless, violent games can also lead to psychological illness. This is because games full of violence will make people feel nervous, leading them to become aggressive. On the other hand, those games will cause people to lose their normal communication skills. For example, people who are addicted to online violent games are used to solving problems with violence, rather than solving problems with rational communication.

In conclusion, I definitely agree that violent video games can increase aggression in our real world. Therefore, we ought to resist violent video games to some extent for mental health and social harmony.
